

# STAR Online Learning System (SOLS) Workshop

Strategies for Teaching based on Autism Research

## Parent Training Content

The parent training class series provides information and training on topics of interest to parents. These classes discuss evidence-based instructional strategies and effective strategies for parents to use at home with their children, while utilizing the STAR Online Learning System.

The STAR Online Learning System (SOLS) is designed to allow your school district to provide access to all students through remote learning opportunities. Through teacher facing, evidence-based lesson plans and a scope and sequence that provides scaffolded learning opportunities, teachers can provide their students individualized learning opportunities. The focus of the instruction uses the evidence-based practices appropriate for students with autism to teach skills in critical areas. See page 2 for more information

**Parent Training  
September 23 and  
30th (Choose 1)  
5:00 - 7:00 PM**

# STAR Online Learning System (SOLS)

## Synchronous Remote Learning for Special Education

STAR Online Learning System (SOLS) is designed to allow your school district to provide access to all students through remote learning opportunities. Through teacher facing, evidence-based lesson plans and a scope and sequence that provides scaffolded learning opportunities, your teachers can provide their students individualized learning opportunities from anywhere in the world.

SOLS has three strands that have been leveled to meet the continuum of needs of all students. The strand content can then be individualized to meet each student's IEP goals.

The focus of the instruction uses the evidence-based practices appropriate for students with autism to teach skills in critical areas. Students at **Strand A** will need caregiver assistance to participate. Students at **Strand B** can participate with limited caregiver assistance. Students at **Strand C** can participate on their own with very limited caregiver assistance.

Lesson plans provide teachers with needed information and presentation materials to conduct synchronous teaching sessions.

Lessons examples:	Materials include:
<ul style="list-style-type: none"><li>• Greeting and Circle Time</li><li>• Responding to language</li><li>• Communicating with others</li><li>• Academics</li><li>• Social skills and play</li><li>• Functional routines</li><li>• Activities to do at home</li></ul>	<ul style="list-style-type: none"><li>• REEL Presentations, which contain lesson content and activities for instructors to share virtually, during synchronous teaching time</li><li>• Visual supports</li><li>• Videos</li><li>• Themed content</li><li>• Printable Independent work activities</li><li>• Printable Homework</li></ul>

SOLS provides school districts with a system for their teachers to implement evidenced-based practices and research-based curriculum—even when classroom learning is not a possibility. STAR Autism Support consultants can provide training to the school district instructional staff to help them implement the lesson plans and teach their students remotely. SOLS also gives parents the opportunity to learn new skills in order to teach their children at home.

### SOLS can be used in many environments:

- Extended school year
- Parent training
- School absence
- School closure
